Q2 2025 business performance

Continued growth in client assets under management

NET FLOW (EURm)

- Q2 net flow EUR 164 (232) million i.e. 4.7%¹ of BoP AuM

CLIENT ASSETS UNDER MANAGEMENT (EURbn)

- Q2 AuM growth EUR 378 million (2.7% q/q), negatively impacted by weaker US dollar
- Growth driven by positive net flow of EUR 164 million and positive market return of EUR 214 million

(1) Based on annualised 4-6/2025 net flows.

Continued growth in Institutional and wealth management

AUM BY CLIENT SEGMENT (EURm)

AUM BY PRODUCT (EURm)

COMMENTS

- 16% AuM growth y/y in the I&WM business area due to positive net flow and favourable market returns
- 16% y/y growth in private wealth management
- International institutional assets increased by 40% y/y driven by Sweden
- Majority of net flow to credit products and allocation products

Note: Private WM and Ultra-high-net-worth (UHNW) segments affected by intra-group portfolio transfers in Q1 2024 so AuM not comparable for these segments.

FEE MARGIN (%)¹

COST/INCOME RATIO

- Improved operational leverage
→ 12 months C/I-ratio down by 11 p.p.

FEE MARGIN

- Fee margin down to 1.14% due to mix effects - strong growth in lower margin international institutional client business and personnel funds
- Standalone product margins largely unchanged

(1) Trailing twelve-months.

Several business highlights in Q2 2025

Institutional and wealth management

- The international asset management business continued to perform well, with new client accounts established, among others, in France and Norway.
- New sales office is established in Luxembourg to support growth in Continental Europe in particular.
- Mandatum launched a new fund, Mandatum European High Yield Total Return Fund, which primarily invests in European high yield bonds.
- Mandatum Asset Management's Growth Equity II fund made two new investments: in a Finnish golf equipment manufacturer Takomo and in a Nordic data consulting company Epical.

Corporate

- Steady growth of unit-linked pensions continued.
- Demand for personnel funds and remuneration consulting continued on a good level.
- Demand for risk products remained good.

Retail

- Good cooperation with Danske Bank continued: loan insurance sales and the average coverage amount of granted loan insurance increased
- Mandatum and Pohjantähti signed a collaboration agreement.

Key drivers of capital generation (1–6/2025)

KEY DRIVERS

Organic capital generation

- Own funds: Stable growth of fee result and solid net finance result on SII basis
- SCR: Predictable, continuous run-off of with-profit liabilities

Capital management

- Own funds: Dividend accrual of EUR 0.50 per share assumed corresponding to set target and assuming even annual dividend distributions
- SCR: Sale on Enento Group plc's shares taken into account

Other

- Mainly unwinding of the transitional measure, P/L of "Other segment" and change of the SA

*Item "Organic capital generation" does not include capital release part, i.e. target solvency ratio release in excess of 100% level. (1) SCR = solvency capital requirement.

Client AuM up 11% y/y, net flow reached EUR 164 million

- Decreased discount rate had a EUR 25 (+33) million negative P&L impact in the quarter
- Unwinding cost EUR 12 (19) million

WITH-PROFIT NET FINANCE RESULT (EURm)

- Net finance result EUR 33 million down from Q2/2024 mostly due to higher cost of liabilities
- EUR -4 (5) million impact from private equity and real estate assets

Note: (1) Return % related to the original portfolio and comments also related to original portfolio.

IFRS Liability and asset sensitivity (original portfolio)

Assets and liabilities are managed by alignment of assets and active management actions

SENSITIVITY BY MATURITY BUCKETS, RATES DOWN 100BPS

COMMENTS

- Interest rate risk related to first eight years of liability cash flows covered by fixed income assets
- 8–20 years liability cash flows covered partially with swaps and fixed income assets
- Liability interest rate risk open for cash flows after 20 years but active liability side management actions in place to mitigate risk
- Total average hedging ratio 97 (88)%. Increase in hedging ratio mainly due to the higher fixed income weight in 5–15-year instruments

IFRS discount rate vs. swap rates Q2 2025

Background

- **Result related to risk policies** is reported quarterly and is part of the capital-light profit before taxes.
 - It is relative volatility on a quarterly level due to the nature of the personal risk insurance business.
 - The comparability between the years 2025 and 2024 is affected by the result related to the insurance portfolio transferred to If in 2024.
 - The result from If portfolio's risk products was EUR 6.4 million in Q2 2024 and EUR 7.4 million in H1 2024.
- The following slides describe details related to the personal risk insurances, such as the risk insurance market, product characteristics and dynamics of the IFRS 17 P&L.

Risk insurance market: Increasing need for personal risk insurances in Finland

Finland underinsured compared to other European countries

Finland with 44 EUR "risk density"¹ vs other EU² avg.

Risk insurance density¹, EUR 2023

- **92% of the individuals do not have term life insurance***
 - The average cover around EUR 73,000 for those having term life insurance.
- **Protection offered by the public sector is not fully trusted****
 - Confidence in the adequacy of statutory social security has declined compared to previous studies.
 - 73% of respondents believe that in the future, citizens will increasingly have to cover the cost of services themselves, for example through private insurance or by preparing for them in other ways.

Earning logic – on a conceptual level profitability is determined as follows...

From earning logic to IFRS 17 accounting

Expected cash flows of new risk policy and how it translates to IFRS 17 – **illustrative example**

Note: RA = Risk Adjustment, CSM = Contractual Service Margin. *) Insurance service result = Result related to risk policies in segment result

IFRS 17 accounting of personal risk insurances – Result related to risk policies

Expected Result related to risk policies is roughly the expected release of CSM and RA deducted by reinsurance and pooling settlements.

In practice, the result related to risk policies (Insurance service result) is as follows:

	=	CSM and RA release	+/-	Experience variance	+/-	Other	+/-	Reinsurance impact on result
Result related to risk policies (Insurance service result)		- Expected to be around 9-10% per year of the CSM and RA - Coverage units define the speed of the release (based on paid and expected claims) → Volatility in claims creates volatility in coverage units and in CSM+RA release.		Experience variance is the difference between expected and actual cash flows (claims and operating expenses) → Naturally volatile in shorter time periods.		Actuarial changes in IBNR liabilities and impact of cash flows that are outside of contract boundaries etc.		- This contains reinsurance contracts and pooling arrangements impact on result - Cash flow items in IFRS 17 P&L are calculated as a gross from reinsurance and pooling. Because of this, impact of reinsurance and pooling is considered separately in this item.

IFRS 17 accounting of personal risk insurances – reporting

- Comments**
- CSM arising from the new sales of risk policies is reported quarterly in the Investor Presentation where the development of the total CSM is shown.
 - Result related to risk policies is split in two parts
 - CSM + RA release
 - Sum of other insurance service result components.
